

## Equipment

- A4 sheet of paper
- Scissors
- Paper Clips

## Challenge

To design and build a helicopter using only paper and paperclips

## Method

1. Take a piece of paper and make three cuts as shown in the illustration.
2. Then fold the paper in on itself at the bottom half – use a paper clip to keep the sides together.
3. Fold the two halves of the remaining paper away from each other, to form the helicopter blades.
4. Stand carefully on a chair and drop your helicopter, making sure it stays upright as you let go!
